Education

Malla Reddy Institute of Technology and Science

Bachelor of Computer Science and Technology (AI-ML) 2022 – 2026

Projects

Chronic Kidney Disease Prediction Using Machine Learning

- **Tech:** Python, Scikit-learn, Pandas, NumPy, Django, HTML, CSS
- Developed a machine learning model to predict chronic kidney disease using patient clinical data.
- Applied data preprocessing, feature selection, and classification algorithms to improve prediction accuracy.
- Designed a Django-based web application for real-time disease prediction and result visualization.

Automating E-Governance Services Using Machine Learning and Artificial Intelligence

- **Tech:** Python, Machine Learning, NLP, Scikit-learn, Pandas, NumPy, Flask
- Developed an intelligent system for automating e-governance services using AI and Machine Learning techniques.
- Integrated insurance charge prediction and sentiment analysis modules to improve decision-making and user service analysis.
- Built predictive models and analyzed public feedback using Natural Language Processing techniques.

Achievements

- **Won 1st** place in a college Learnathon by building and deploying a machine learning model under tight deadlines, demonstrating quick learning and effective teamwork.
- Solved over 100+ data-structures and algorithm challenges on Leetcode and HackerRank, covering key topics such as arrays, linked lists, trees, graphs, and dynamic programming and Practising regularly.

Certifications

Software Engineering Virtual Experience – J.P. Morgan Chase Co. (Forage): Completed a real-world software engineering simulation involving Python, debugging, data visualization, and financial technology workflows.

Python for Data Science – IBM (CognitiveClass.ai): Learned data analysis, visualization, and machine learning fundamentals.

Data Analysis with Python – IBM (CognitiveClass.ai): Performed exploratory data analysis, data cleaning, and derived statistical insights.

SQL and Relational Databases 101 – IBM (CognitiveClass.ai): Gained hands-on experience with SQL queries, joins, and relational database concepts.

Skills

- **Programming Languages:** Python, Java, JavaScript
- **Web Technologies & Databases:** HTML, CSS, Django, MySQL.
- **Tools & Platforms:** Power BI, Git, GitHub, Jupyter Notebook, VS Code.
- **Libraries & Frameworks:** Pandas, NumPy, Matplotlib, Seaborn, Scikit-learn, TensorFlow, Machine Learning
- **CS Fundamentals:** Data Structures and Algorithms, Object-Oriented Programming, Operating Systems, Computer Networks
